- Business Communications Consultant at ADS, Deutsche Telecom & Vitrociset
- English Teacher at the Wall Street Institute, Ostia
- Translator for the Banca D'Italia
- Has written articles on political economy for the British and Irish press and has also contributed to broadcast programmes on BBC World Service

Short description of the training course:

The main goal of the International Corporate Seminar is to provide a framework of conceptual tools needed to analyse finance decisions based on the fundamental principles of modern financial theory. Participants will learn the language and the key-components of corporate finance and investments, including the calculation of the present value, the evaluation of bonds and shares, the NPV rule, risk measurement, capital budgeting and the pricing model of capital assets. The course aim is to make the students capable of reading, understanding and using the management tools of corporate finance and investment decisions.

Moreover, the Seminar provides the opportunity for students to discover and analyse the main financial decisions implemented by large companies. These skills can be applied to managerial challenges in the real world and in the students' specific field.

Learning outcomes:

At the end of the Seminar participants will be able to:

- Evaluate a complex project using different techniques in public and private environments
- Understand where and how conflicts between various stakeholders of a company shape their financial decisions and risk assessment
- Recognize the implications of behavioural issues on corporate finance
- Understand and apply the real options approach to risk assessment
- Analyse the functions of the financial markets and implement econometric models to assess key indicators of market and credit risk factors
- Understand how the IRB models work and how they are used by banks for management decisions, especially with regard to the credit pricing and analysis of the risk-reward
